

Total Joint Replacement Program

Our Total Joint Replacement Program provides the necessary tools and education to support individuals who have recently undergone surgery for joint replacement.

We work to transition individuals back to the comfort of their own homes on their own terms as quickly and safely as possible. We create customized care plans by collaborating with patients, families, physicians, and specialty providers to ensure each individual receives the unique care they need.

Our skilled staff, including physical therapists, occupational therapists, and rehabilitation nurses then chart the best course of action for restoring mobility. Our focus is on developing quality connections with patients, and providing evidence-based treatments that reduce the risk of injury and hospital readmissions.

Total joint replacement is one of the most successful interventions in medicine - with more than 1 million performed in the U.S. annually.”

Biotechnology Information

What to Expect

Education

We provide the tools and resources needed to understand care plans, perform physical therapies, and guide recovery.

Highly Trained, Caring Staff

Trained staff connect with individuals to carry out exercise programs designed to improve strength, flexibility, endurance, and mobility.

Initial Visits within 24 Hours

Initial visits with a nurse and/or physical therapist are scheduled within 24 hours of discharge.

Customized Care Plans

Personalized risk assessments and tailored care plans for every individual to include personalized exercise programs.

Network of Care

With our extensive network of care providers, we are able to provide counselors, therapists, and other skilled professionals to ensure quality care at every step of the recovery process.
